Best Practices…Achieving Sustainability and Zero-Landfill Goals (Case Study Approach)

How to achieve and surpass your sustainability and zero-landfill goals with a cost effective approach. Case Studies and best practices put in place from corporations who have achieved zero-landfill or set sustainability targets. Implementation of a Resource Manager to handle your non-core competencies of waste, recycling and corresponding logistics.

We will define, review and discuss in a Power Point presentation:

Current Customer Zero Landfill Approach

Lean Manufacturing – labor force optimization and manufacturing cost reduction.

Environmental Sustainability – reduction of waste to landfills, improving in-plant material logistics and training and compliance.

Recycling Management Program – innovative material disposal and re-use options and increased recycling credits.

Chemical Management and Conveyance

Secure Material Destruction

Supply Chain Optimization and Consolidated Vendor Management

Hazmat and Safety Training

Best Management Practices
